**DANDY CURBS** takes landscape edging and borders to the next level, our product is not pre-cast. It is custom installation done at your residence, business, etc. Offering craftsmanship and artistry with a variety of options such as lighted, masonry impressions, stamped walkways & pattern style edging. Concrete edging is a hot new idea that's been around for nearly three decades. And now it's taking residential and commercial landscaping by storm.

### **Free Estimate**

Dandy Curbs will send out an Estimator / Consultant to meet with you at your project or home. We will provide a broad sampling of ideas to enhance the look of your yard and suggest alternative means to save time on maintenance. At the end of our meeting we will provide you with a written estimate and sketch of the proposed layout.

### **Preparing for your curb!**

A Bed Edger is used to prepare the ground for your new curbing. We are very careful in working around your existing landscaping. A trench is cut 1.5 to 2 inches deep to ensure that proper height for the proper profile is maintained. Our equipment is specifically designed to preserve your lawn, beds and the other surroundings.

### **Mixing / Curbing**

The concrete is mixed to proper proportions in a mortar mixer. Our mix of Portland cement, coarse concrete sand, air entrainment solution and reinforcing polypropylene fiber creates a strong, durable "winterized" concrete product. The machine produces a curb with a compressive strength of 3,000 PSI.

### **Curb / Trowel / and Finish**

The concrete mix is wheeled to the site, fed into the curbing machine, and extruded into a beautiful continuous concrete landscape border. Control joints are then cut to facilitate some flexibility and avoid cracking. The finishing touches to your beautiful curb are accomplished by using specialized trowels. We then can stamp the concrete adding accent colors, in a variety of impressions and textures. We also offer a cure and seal product that protects the curb from climatic elements.

### **Worried about the clean-up? Don't!!!**

Dandy Curbs is in the business of giving you beautiful curbing while minimizing the impact to your landscaping. We do not require the wood forms, cement trucks, and messy mixing processes of conventional concrete jobs.
